

Dear Recruiter,

I am writing in response to the available Programmer position at your organisation. I have great experience in programming including CorePhp, Drupal, JavaScript, jQuery, Laravel, Codeigniter. Additionally, I have a Bachelor's degree in computer engineering and nine years of experience working as a programmer, leader, database administrator and server administrator.

I work in an agile software development environment, collaborating with other departments to ensure a top quality product that meets clients's needs is always produced. I have excellent technical and analytical abilities and my coding strengths as a programmer mean I am able to correctly execute needed code sections with few errors. I have strong verbal and written communication skills and write solid technical manuals for developed applications.

I would be a terrific choice for the programmer position. I am highly detail-oriented and can visualize how code will translate into the finished application. My ability to prioritize and effectively manage my time allows me to juggle several projects simultaneously.

I fully expect that upon a review of my enclosed resume and qualifications, you will contact me for an interview for the programmer job. I have included both my email as well as my cell number. I can be contacted via either method.

Sincerely,

Chintan Patel
